

How to change hostname of the VMTurbo appliance

Q.

We want to change the hostname of the VMTurbo appliance to match our VM/System naming conventions. How do we accomplish this?

A.

The VMTurbo appliance runs on a Linux OS and as such standard Linux commands are used to achieve a hostname change:

ssh into the appliance

UN: root/PW: vmturbo

Run:

```
hostname -v <new_host_name>
```

You can run the *hostname* command again to verify the hostname change.
